

## ToolControl - the intelligent socket box.

If a tool is taken out, ToolControl automatically calls up the correct tightening program. Activated from the tightening control unit, ToolControl shows the operator the tool that is required for the current tightening process.

### Features ToolControl

- Processor monitored tool removal
- Status reports via LCD plain text display
- Status indication for each tool
- Available with two, four or eight tool inserts
- Cascatable up to 32 tools
- Connection to the control unit by a systembus cable
- Optional interfaces: Profibus, Ethernet for the integration in a PLC
- Stable aluminium pressure die housing with mounting plate
- Customised tool inserts (inserts made of synthetic material)
